

# Winning Combination ... Anyway

**15"** As you can see from the part numbering section, Tough TouchPLC is simply a combination of Tough Panel and Director PLC housed in a compact and convenient package. Any size display can be combined with any size PLC as long as it fits the package. For example, you can get a 4" display with Director Nano or you can get a 15" display with 96 I/O Director or you can get a 15" display even with a 32 I/O Director. All Features such as 3D Graphics, Animation, Alarming, Data Acquisition, Recipe, On-Line programming, Advanced Math capability, 3ms scan time, Auto-tuned PID, PWM capability, Ethernet communication and of course reliable operation under High Heat and Humidity, remains the same.
